Investment Valuation –

Destra Capital Advisors LLC (the “Adviser”) determines the values of Destra International & Event-Driven Credit Fund’s (the “Fund”) assets in good faith pursuant to the Fund’s valuation policy and consistently applied valuation process, which was developed by the audit committee of the board of trustees (the “Board”) and approved by the Board. Portfolio securities and other assets for which market quotes are readily available are valued at market value. In circumstances where market quotes are not readily available, the Board has adopted methods for determining the fair value of such securities and other assets, and has delegated the responsibility for applying the valuation methods to the Adviser. On a quarterly basis, the Board reviews the valuation determinations made with respect to the Fund’s investments during the preceding quarter and evaluates whether such determinations were made in a manner consistent with the Fund’s valuation process.

Fair Value Measurements –

U.S. generally accepted accounting principles defines fair value, establishes a three-tier framework for measuring fair value based on a hierarchy of inputs, and expands disclosure about fair value measurements. It also provides guidance on determining when there has been a significant decrease in the volume and level of activity for an asset or liability, when a transaction is not orderly and how that information must be incorporated into a fair value measurement. The hierarchy distinguishes between market data obtained from independent sources (observable inputs) and the Fund’s own market assumptions (unobservable inputs).

These inputs are used in determining the fair value of the Fund’s investments. These inputs are summarized in the three broad levels listed below:

- Level 1 – unadjusted quoted prices in active markets for identical assets and liabilities that the Fund has the ability to access.
- Level 2 – other significant observable inputs (including quoted prices for similar securities, interest rates, prepayment speeds, credit risk, etc. and quoted prices for identical or similar assets in markets that are not active).
- Level 3 – significant unobservable inputs (including the Fund’s own assumptions in determining the fair value of investments).

The inputs or methodology used for valuing securities are not necessarily an indication of the risk associated with investing in those securities. The following is a summary of the valuation inputs, representing 100% of the Fund’s investments, used to value the Fund’s assets and liabilities as of June 30, 2019:

(1) Unobservable inputs for discount rates and EBITDA valuation multiples were weighted equally using the high and low ranges of inputs.

For private company equity interests, various factors may be considered in determining fair value, including but not limited to multiples of earnings before interest, taxes, depreciation and amortization ("EBITDA"), cash flows, net income, revenues or, in limited instances, book value or liquidation value. All of these factors may be subject to adjustments based upon the particular circumstances of a private company or the Fund's actual investment position. For example, adjustments to EBITDA may take into account compensation to previous owners or an acquisition, recapitalization, restructuring or other related items.
